p1_search_introduction

Project 1: Search in Pacman

All those colored walls,
Mazes give Pacman the blues,
So teach him to search.

Introduction

In this project, your Pacman agent will find paths through his maze world, both to reach a particular location and to collect food efficiently. You will build general search algorithms and apply them to Pacman scenarios.

As in Project 0, this project includes an autograder for you to grade your answers on your machine. This can be run with the command:

```
python autograder.py
```

See the autograder tutorial in Project 0 for more information about using the autograder.

The code for this project consists of several Python files, some of which you will need to read and understand in order to complete the assignment, and some of which you can ignore. You can download all the code and supporting files as a [zip archive](#).

Files you'll edit:

<u>search.py</u>	Where all of your search algorithms will reside.
<u>searchAgent s.py</u>	Where all of your search-based agents will reside.
Files you might want to look at:	
<u>pacman.py</u>	The main file that runs Pacman games. This file describes a Pacman GameState type, which you use in this project.
<u>game.py</u>	The logic behind how the Pacman world works. This file describes several supporting types like AgentState, Agent, Direction, and Grid.
<u>util.py</u>	Useful data structures for implementing search algorithms.
Supporting files you can ignore:	
<u>graphicsDis play.py</u>	Graphics for Pacman
<u>graphicsUti ls.py</u>	Support for Pacman graphics
<u>textDisplay _py</u>	ASCII graphics for Pacman
<u>ghostAgents _py</u>	Agents to control ghosts
<u>keyboardAge nts.py</u>	Keyboard interfaces to control Pacman
<u>layout.py</u>	Code for reading layout files and storing their contents
<u>autograder. py</u>	Project autograder
<u>testParser. py</u>	Parses autograder test and solution files
<u>testClasses _py</u>	General autograding test classes
test_cases/	Directory containing the test cases for each question

searchTestClasses.py

Project 1 specific autograding test classes

Files to Edit and Submit: You will fill in portions of search.py and searchAgents.py during the assignment. You should submit these files with your code and comments. Please *do not* change the other files in this distribution or submit any of our original files other than these files.

Evaluation: Your code will be autograded for technical correctness. Please *do not* change the names of any provided functions or classes within the code, or you will wreak havoc on the autograder. However, the correctness of your implementation -- not the autograder's judgements -- will be the final judge of your score. If necessary, we will review and grade assignments individually to ensure that you receive due credit for your work.

Academic Dishonesty: We will be checking your code against other submissions in the class for logical redundancy. If you copy someone else's code and submit it with minor changes, we will know. These cheat detectors are quite hard to fool, so please don't try. We trust you all to submit your own work only; *please* don't let us down. If you do, we will pursue the strongest consequences available to us.

Getting Help: You are not alone! If you find yourself stuck on something, contact the course staff for help. Office hours, section, and the discussion forum are there for your support; please use them. If you can't make our office hours, let us know and we will schedule more. We want these projects to be rewarding and instructional, not frustrating and demoralizing. But, we don't know when or how to help unless you ask.

Discussion: Please be careful not to post spoilers.
